

Building Bat Boxes

Use only untreated wood – tanalised wood is unsuitable. Don't use any type of wood preservative or paint. Bats are sensitive to smells and some chemicals can be harmful. Fixing the box with nails or screws can damage trees so attach the box with wire round the trunk or branch – use a protector i.e. a piece of hose over the wire. Check for damage from the wire yearly

Screw side, back, front and base together to make draught-proof finish
